## Intel® QuickAssist Technology Hardware Version 2.0

### Addendum

November 2023

Performance varies by use, configuration and other factors. Learn more on the Intel's [Performance Index site](#).

Performance results are based on testing as of dates shown in configurations and may not reflect all publicly available updates. See backup for configuration details. No product or component can be absolutely secure.

Your costs and results may vary.

Intel technologies may require enabled hardware, software or service activation.

The products described may contain design defects or errors known as errata which may cause the product to deviate from published specifications. Current characterized errata are available on request.

Code names are used by Intel to identify products, technologies, or services that are in development and not publicly available. These are not "commercial" names and not intended to function as trademarks.

# 1 Description of Release

---

This addendum document describes additions/deviations from the QAT2.0 Release Notes available at <https://intel.github.io/quickassist>.

## 1.1 Features

- Chaining support.
- Hardware/software Fail-over support for Compression
- User Queue support.
- Rate limiting

## 1.2 Limitations

- Legacy crypto operations are disabled by default. They can be enabled using the `--enable-legacy-algorithms` configuration option.

## 1.3 Supported Operating Systems and Platforms

The software in this release has been validated with the following configurations.

OS	Kernel Version	Platform
RedHat 9.2	6.2.0-emr.bkc.6.2.19.2.52.x86_64	EMR XCC A0/A1 EMR MCC R0/R1

## 1.3.1 Package Version

The following table shows the OS-specific package versions for each platform supported in this release.

Chipset or SoC	Package Version
Top-Level Package	QAT20.L.1.1.20-00030

## 1.3.2 SHA256 Checksum Information

The following table provides SHA256 checksum information.

Package	SHA256 Checksum
QAT20.L.1.1.20-00030	01f47cbee4f3cd21e8578f13961befda3c48f7d60d6eefa303738b3b17fc6911

## 1.4 Known Issues

---

**Important:** These issues are in addition to the issues documented at: <https://intel.github.io/quickassist>

---

### 1.4.1 QAT20-26988 [Chaining] compression/encryption failure status is not returned when chained operation fails

<b>Title</b>	[Chaining] compression/encryption failure status is not returned when chained operation fails.
<b>Reference</b>	QAT20-26988
<b>Description</b>	If error occurs in either compression or encryption during a chained operation, the chaining service returns error, but does not include details on the compression/encryption failure.
<b>Implication</b>	Error details for compression/encryption operations of chained operation are not returned.
<b>Resolution</b>	No workaround currently available.
<b>Affected OS</b>	Linux
<b>Driver/Module</b>	QAT IA - Chaining

## 1.4.2 QAT20-31286 [VIRT] Installation of driver in guest OS reports incorrect error message

<b>Title</b>	[VIRT] Installation of driver in guest OS reports incorrect error message
<b>Reference</b>	QAT20-31286
<b>Description</b>	When the QAT driver is installed in guest OS with QAT VF passed in, there will be <code>qat_vqat module not installed</code> error printed.
<b>Implication</b>	User will see an error when installing, but there is no implication to functionality.
<b>Resolution</b>	Future Fix.
<b>Affected OS</b>	Linux
<b>Driver/Module</b>	QAT IA - General

## 2 Revision History

---

Document Version	Description	Date
003	PV Release	Nov 2023
002	PC Release	Sept 2023
001	Initial Release	April 2023
